

Why Ovation Hand for Your Carpal Tunnel Surgery

Working with your Primary Care Doctor is important, especially when your journey leads to surgery, but not all procedures for Carpal Tunnel are created equal.

Traditionally, the surgical options for carpal tunnel syndrome required a long recovery period and had a higher risk of nerve damage. This is because the most common surgical solution performed today requires cutting a 1-2 inch incision into the hand and wrist to view and cut the carpal ligament. As a result, people either resigned to living with the pain associated with carpal tunnel syndrome or had to find a way to take an average of one month off work to recover. Ovation Hand Institute offers a revolutionary solution that allows you to get back to your life.

Ovation Hand Institute utilizes an ultra-minimally invasive procedure that doesn't require a surgical incision, and as a result, most people are back to work in 1-2 days. This technique has proven highly effective, and it is less expensive than more invasive procedures.

Immediate Relief

15 minute in-office procedure

Our ultra-minimally invasive technique provides immediate relief after a short, 15 minute procedure. It doesn't require a surgical incision, and as a result, most people are back to work in 1-2 days.

Fast Recovery

Return to normal activities in 1-2 days

People are typically able to return to normal activities in 1-2 days. Don't just take our word for it. See what our patients are saying about Ovation Hand Institute.

Safe & Effective

Ultra-minimally invasive procedure

We specialize in safe, ultra-minimally invasive procedures. Studies about our technique have been published in peer-reviewed medical journals.

What Patients are Saying:

“ This surgery has the ability to be life-altering. I had immediate relief from the numbness. The recovery time as compared to conventional surgery is simply amazing. The care and genuine concern have been nothing less than exceptional. I am and will continue to spread the word as an advocate for this procedure. ”

Brett. K

Patients have immediate relief ...

“ For the last six months, I would awake at night with painfully lower arm, hand, thumb and next two fingers. Now I sleep through without any pain or tingling sensation. ”

Wayne S.
